Danley Sound Labs - Step-by-Step Guide for Installing a Library DFA File

Preparing the Amplifier

1. Unzip the contents of the downloaded folder if you have not already done so.

2. Connect your amplifier to your PC using the appropriate cable.

3. Wait until the Online light on the face of the amplifier stops blinking.

4. Launch the System Engineer software.

5. Click the "Go Online" button on the left side.

6. Double-click the device to launch the control panel.

Loading the DFA File

7. Select the **load factory settings...** option from the file menu.

8. Open the amplifier.dfa file intended for use from the folder titled **240520 Danley DNA DFA Preset Library**

9. Navigate to the "Setup" tab.

10. If the library loaded properly, you will find the name of the library and amplifier under the input section. This process will overwrite all saved settings. Please backup your current amplifier settings.

11. A select number of multi-channel loudspeakers are found under the module preset recall.

12. Most of the product line is stored under the component recall section.

13. Please refer to the **240520 PRESET STACK REFERENCE.pdf** file to select the correct loudspeaker file, or load the correct file from the **240520 DNA Pro and C Series Individual Presets** folder.
